

Betaine GoldTM For Better Methionine & Choline Utility

Betaine GoldTM
with Methyle Donor for
Optamizing Performance and Profitability

Betaine GoldTM

with Methyl Donor for
Optamizing Performance and Profitability

Composition :

Betaine HCL
Methyl transferase
Methyl donors
Gut modulators
Cofactors

Birds require a constant supply of dietary methyl groups. During heat stress and disease period the requirement for methyl groups increases it is transferred from methylation cycle

Betaine gold effectively balances water in cells and prevents cellular dehydration.

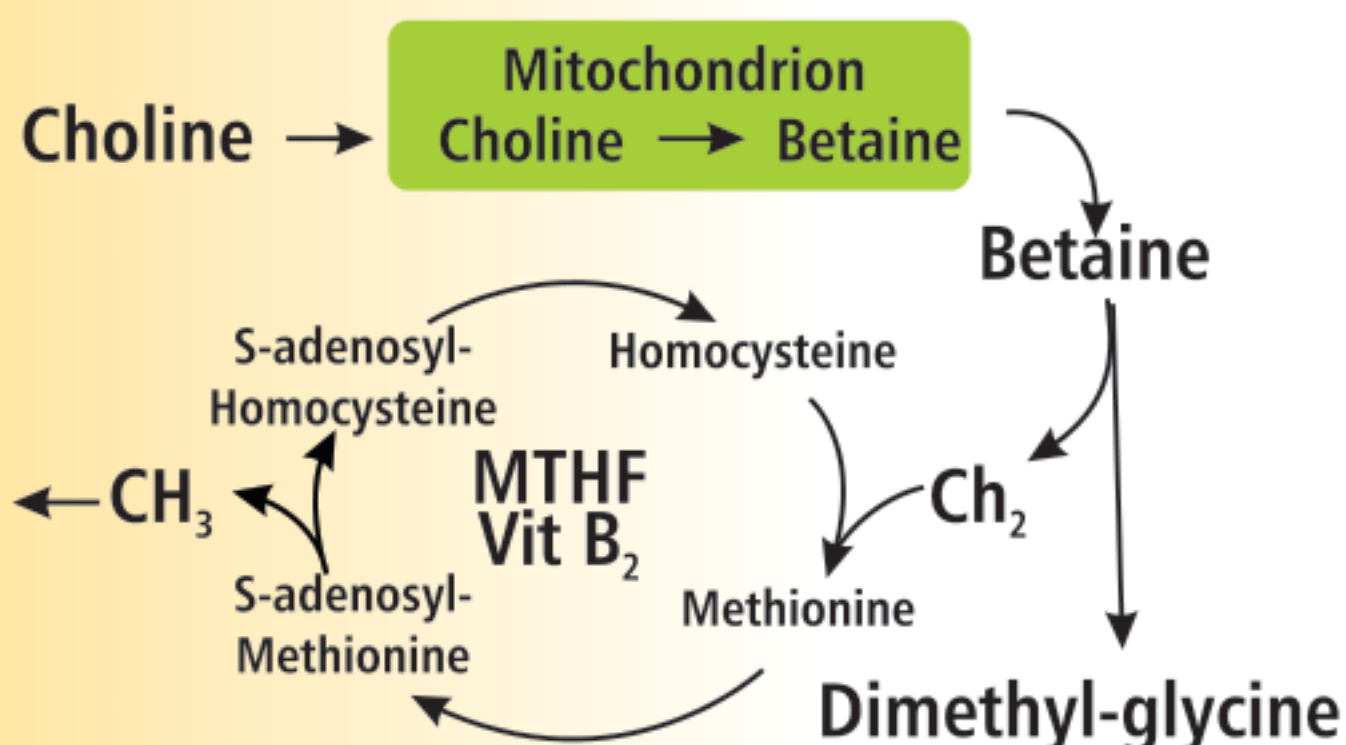

- Acts as osmolytic superior antistresser
- Maintains gut integrity
- Reduces gut lesion scores

Benefits :

- Improves gut health and reduces lesion
- Supply methyle groups
- The ability of betain gold to provide osmotic stability to intestinal cells during coccidiosis helps in improved coccidiosis resistance
- Betaine gold helps in controlling fatty liver syndrome by increasing cartinine levels
- Betaine gold helps in improves nutrients digestibility and absorption of amino acids
- Higher methonin level directly effects egg weight and egg mass

Dosage :

For feed : 500 g to 1 kg per ton of feed
For water soluble : 2 gm for 3-4 lit drinking water for 7-15 days
or recommended by veterinarians

Presentation : 1 kg & 25 kg
